Introduction

This user manual provides instructions on how to use the Toodle Peer Evaluation App. It is designed for students, instructors and administrators who need to interact with the system.

The goal of this guide is to help users understand how to:

- Log into the system
- Navigate the interface
- Create and manage classes and assignments
- Participate in peer evaluations

Project overview

The Peer Evaluation App is an academic platform for structured peer review and group evaluation. It enables instructors to create courses, assignments, and organize students into groups. Students can submit work and provide anonymous peer evaluations using rubrics, ensuring fair assessment of individual contributions in collaborative projects. Use it for group project evaluations in software engineering courses, peer review of presentations, written assignments, and team contribution tracking and accountability.

Why this program?

This user's guide is intended for students and education staff in the Okanagan, and is a local application intended for users in the Okanagan school system. Educators: please feel free to suggest updates or improvements!

Pre-Requisites

To use this program as a student, you must have your email registered with your school. Your school will either create an account for you with or let you create that account yourself and add you to your classes later.

If you are a teacher, you can either first log in and create a normal 'student account' before your admin promotes you to a teacher, or simply ask your admin to create a teacher account for you.

To become an admin, an existing admin must promote your account.

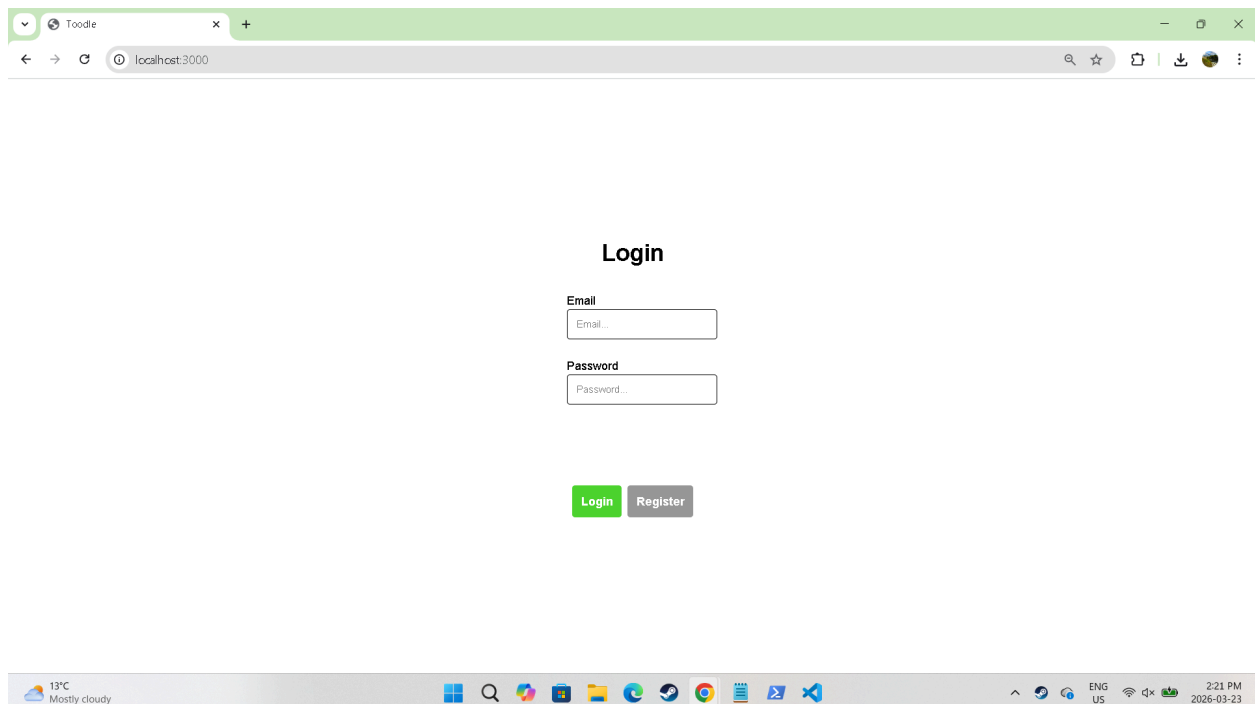

Kanban Board

To track the progress of features we intend in this web application, refer to the Kanban board at:

Getting Started

Login Instructions

1. Go to the access portal or any other link that leads to this website. Your login will be started automatically when you attempt to access the website. The login page will look like this:

The screenshot displays a web browser window with a single tab titled 'Toodle'. The address bar shows 'localhost:3000'. The main content area of the browser contains a login form. At the top of the form is the heading 'Login'. Below this heading are two input fields: the first is labeled 'Email' and the second is labeled 'Password'. Underneath these fields are two buttons: a green button labeled 'Login' and a grey button labeled 'Register'. The browser's taskbar at the bottom of the screen shows the system clock as 2:21 PM on 2026-03-23, along with various system icons and the language set to ENG US.

2. If you do not have an account registered, you can register your own new account by clicking the 'Register' button. It will lead to to the registry page:

Register

Name

Email

Password

Confirm Password

Enter your first and last name, your school or personal email, password and a second copy of your password in the textboxes. Here is an example, if your name was Doug Simmons:

Name

Email

Password

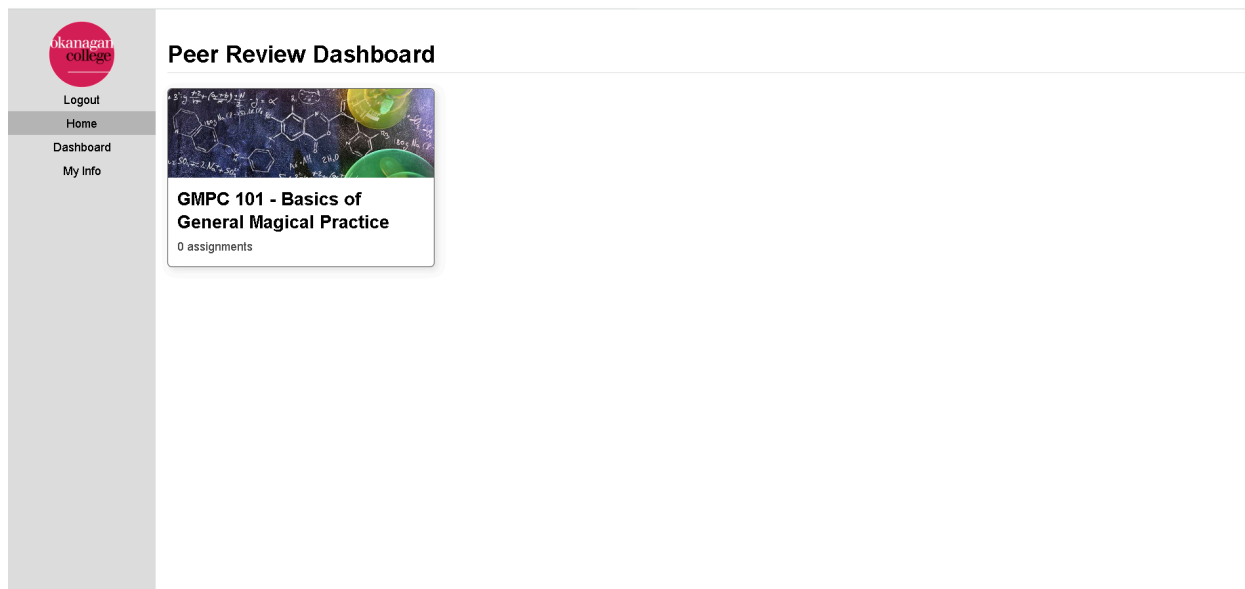

Confirm Password

(Cont.) This can be accessed at any time by going to root/register.

3. Now log in with either your new or old account. Accounts can also be created for you by administrators. You should now be at the homescreen, which should contain all the tools you need to get started with posting, completing, turning in or reviewing assignments.

Basic Site Overview

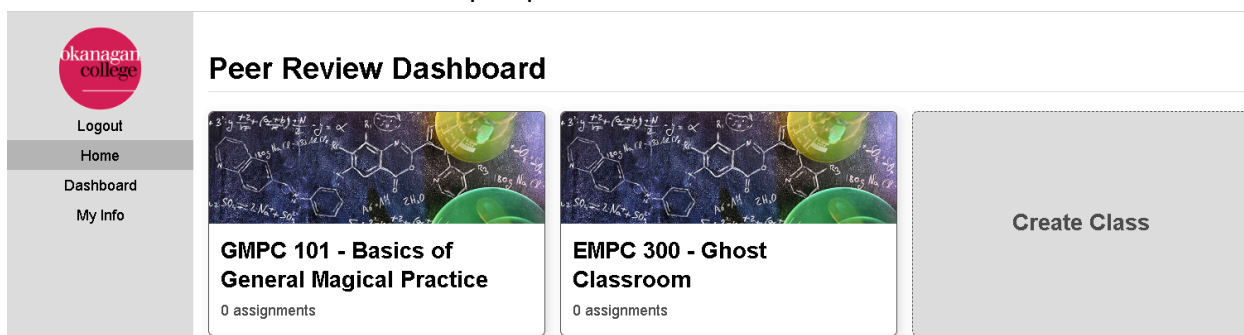

(REPLACE WITH BETTER IMAGES THAT SHOW COOL ITEM BAR AND MORE FUNCTIONALITY.)

Let's go through the parts of this website in order:

1. Peer Review Dashboard

The peer review dashboard. This contains any of the classes you are enrolled in or have created. Here is the same from a teacher's perspective.

As you can see, EMPC 300, a class that our example student up above was not enrolled in, shows up only to the teacher that created it. Admins can view all classes, regardless of who created them or if they are enrolled. Also note the "Create Class" button.

- A) To Create a Class: To Create a class, press on the create class button and simply fill out the class name. This will automatically create a virtual classroom with that name.
- B) To Add Students: Here is the homepage for the teacher inside a class:

[Home](#) [Members](#)

New Assignment Name:

[Add](#)

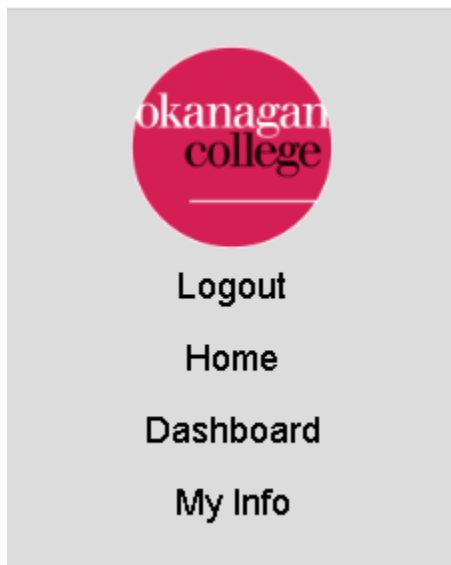

To add students, click on the 'Add Students via CSV' button, then provide a csv file (You can create a csv file with any text program by renaming a .txt file to .csv) in this format:
id,name,email

Here is an example of a csv file:

```
id,name,email
000000016,Harry Potter,HPotter@gmail.com
313564323,Burnice White,BWhite@outering.gov
000000043,Albert Fawkes,coolAF_843@gmail.com
```

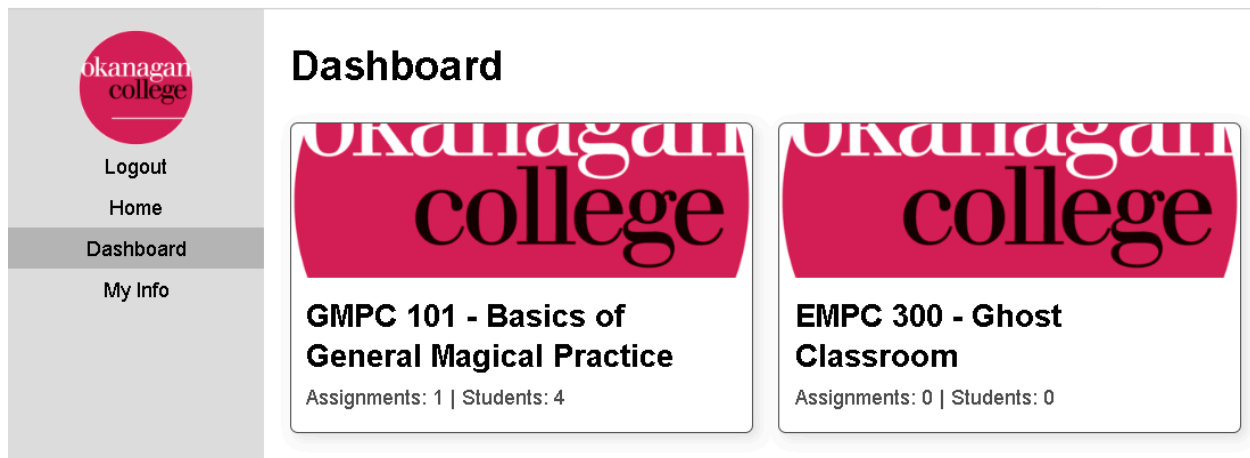

- C) To Create an Assignment: Simply fill out the assignment name and an assignment will be created for you! You can then attach files, descriptions, and due dates to the assignment via the edit feature.

2. Sidebar and Misc. Pages

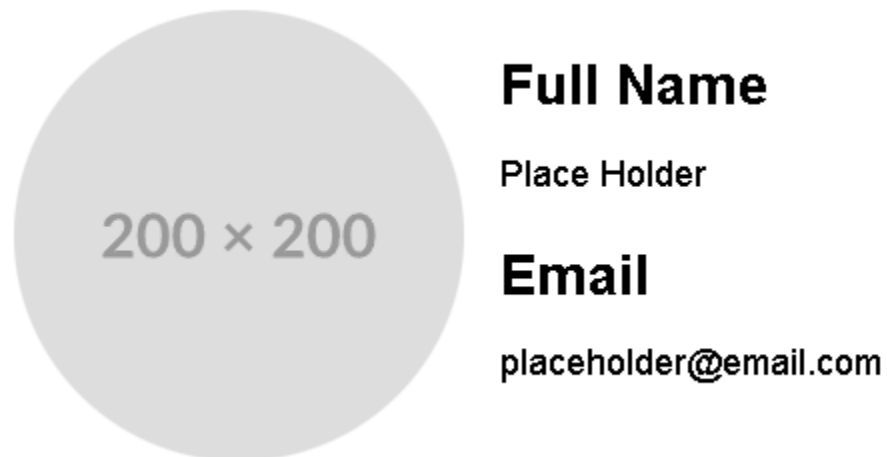

- A) Logout will allow you to automatically sign out, letting you log in as a different user.
- B) Home allows students to view all their classes and teachers to create new ones. Admins can see every class but cannot see classes in the dashboard.

- C) Dashboard will list active classes for teachers as well as the number of assignments and students registered in said classes. It will not do anything for students or admins.

- D) My Info allows you to view your profile with your name and email listed.

Appendix.
